1/02/2020	Invalid data	27.9	30	50	42		Data was deemed valid due bushfire smoke causing a bypass coalescing filter and TEOM mass transducer to block, plus excessive filter loading.

Point 3	6.9	6.5	4.0	No	<p>High monthly and annual average dust deposition were recorded at Monitoring Point 3 between the monitoring period of 13 Dec 2019 to 10 Jan 2020. The monthly Total Insoluble Solids = 9.4g/m2/mth comprising 6.0g of Ash content and 3.4 g of Combustible Matter.</p> <p>No extraction was undertaken during the monitoring period. Vegetation clearing in Cell 1A commenced in December however this location is more than one kilometre from the dust gauge. Field observation indicated the presence of dust, ash, vegetation and algae in the dust gauge. It must be noted that almost half of the dust gauges which make up Dixon Sand's dust deposition monitoring system (for both Haerses Road and Old Northern Road quarries) were observed to contain visible ash, dust and returned higher dust deposition results than under normal circumstance. This is likely to be attributed to the on-going bushfires in the Greater Sydney and NSW regions, coinciding with high PM10 readings in December and January.</p>
