19/03/2018	59.3	15.5	30	50	42	Yes	EPA Self Report Ref C03751-2018 (reported on 19/03/18 - EPL3916, 14:55pm) : The requirements of EPL3916 condition M2.4 was followed. The quarry attempted to minimise dust generation on site immediately by utilising the water cart for dust suppression. A review of the TEOM and meteorological data indicates that the 5 minute PM10 readings have been increasing since midnight of 19/03/18 due to the North-westerly winds, which consequently increased the 24 hour PM10 average leading to the exceedance. Dust generating operations on Lots 1 and 2 were ceased after one hour of receiving the alarm. No dust generating activities are occurring on Lot 29. The quarry has restricted its operations to Lot 196 only for the rest of the day. The PM10 levels and meteorological conditions will be reviewed tomorrow morning prior to any recommencement of dust generating activities on Lots 1 and 2. Hazy condition throughout western Sydney and Maroota area.
20/03/2018	36.1	15.6	30	50	42	Yes
